DAX Systems Inc. Selected for Membership in Avaya DevConnect Program

Network of companies creates innovative, IP-enabled Intelligent Communications applications that extend the value of multivendor networks

For Immediate Release:

PARSIPPANY, N.J. – DAX Systems Inc., a premier provider of applications servers specifically engineered for the telephony market, today announced it has been selected by Avaya Inc. (NYSE: AV), a leading global provider of business communications applications, systems and services, for membership in the Avaya DevConnect program.

DAX Systems Inc. telephony applications servers provide a scalable and dynamic platform engineered for high availability and reliability. As a result, companies can access the benefits of IP telephony, while ensuring the bulletproof reliability of a traditional legacy TDM architecture.

The Avaya DevConnect program promotes the development, compliance-testing and co-marketing of innovative third-party products that are compatible with standards-based Avaya solutions. Member organizations have expertise in a broad range of technologies – including IP telephony, contact centers and mobility applications – helping companies extend the value of multivendor networks and transform voice into an intelligent business application that delivers true value.

“Membership in Avaya’s developer community will help us build our business by serving customers more efficiently and effectively,” said Ernie Kaminaris, CEO of DAX Systems Inc. “Building on Avaya resources and working more closely with the company to deliver compliance-tested solutions to the market, we are able to reduce network complexity, improve security and reliability, and speed time to deployment so businesses can quickly realize a benefit to their bottom line.”

The Avaya DevConnect program currently includes thousands of software and hardware developer companies, integrators, service providers and customers. Members have created a broad array of innovative solutions tested for Avaya compliance, including natural language speech recognition applications, wireless services, specialized computer telephony integration and reporting capabilities, and applications tailored for specific vertical industries.

Through the DevConnect program, Avaya provides a number of tools and capabilities to member companies. One example is Application Enablement Services (AES)—a set of application programming interfaces, protocols and Web services that makes it easier for developers to create Avaya-compatible networks, devices and applications.

“With the involvement of companies like DAX Systems Inc., our Avaya developer community has become a catalyst for rapid innovation — creating multivendor applications that help enterprises around the world unleash powerful new possibilities for operating more efficiently and effectively,” said Eric Rossman, vice president, developer relations and technical alliances, Avaya. “We help businesses embed secure, reliable Intelligent Communications into the very fabric of their organization so employees and customers have ready access to information regardless of where they are and how they prefer to communicate.”

As a member of the DevConnect program, companies have access to a wide range of support from Avaya, including technical resources and training. There are three levels of membership – Registered, Gold and Platinum – each entailing progressive levels of marketing and sales involvement. Free Registered membership is available to anyone interested in designing Avaya-compatible solutions. Gold-level members and Platinum members must meet rigorous Avaya criteria for customer satisfaction, product support, business operations, marketing and sales. DAX Systems Inc. is a Gold member of the Avaya DevConnect program.

Membership information and a listing of solutions developed and tested under the DevConnect program are available at www.avaya.com/devconnect.
