

PRESS RELEASE

For Immediate Release

SpeechSwitch, Inc. Partners with DAX Systems, Inc. for deployment of Speech-Enabled Auto Attendant

Matawan, NJ, December 16, 2007 -- SpeechSwitch, Inc. (OTC Bulletin Board: SSWC), a leader in speech-recognition technology announced that they are partnering with DAX Systems, Inc. for the deployment of their turnkey Speech Enabled Auto Attendant. SpeechSwitch, Inc. ("SpeechSwitch") previously was a wholly owned subsidiary of iVoice, Inc. (OTCBB:IVOI) prior to the spin-off from iVoice that was completed in August 2005 as a special stock dividend distribution to iVoice shareholders.

The Speech Enabled Auto Attendant (SEAA) will be integrated into the DAX server product lines by analog or digital programming. The system facilitates easier communication for employees, customers, business partners and suppliers. It places people at ease by allowing callers to use their most natural form of communication -- their own voice -- to reach a specific person or department. By speaking a name, a caller can be promptly transferred to the appropriate number. Callers have the option of bypassing touch-tone menus and spell-by-name directories and instead, use their natural voice to reach their intended party.

"Building on SpeechSwitch resources and working more closely with the company to deliver compliance-tested solutions to the market, we are able to reduce network complexity, improve reliability, and speed time to deployment so our customers can quickly realize a benefit to their bottom line," said Ernie Kaminaris, President and CEO of DAX Systems, Inc.

The Speech Enabled Auto Attendant is a complete cost-effective solution that works with existing phone systems and voice mail packages. Every department and employee is accessible from one local or long-distance phone number. The SEAA capabilities ensure that all calls reach their intended destinations at all times.

"As a Dev Connect member with Avaya we are excited about being able to supply the Avaya IPO office sales force and customer base with newly approved cost effective DAX servers that will also incorporate our Speech Enabled Auto Attendant," said Bruce Knef, CEO of SpeechSwitch, Inc.

About DAX Systems, Inc.

DAX Systems Inc. is a leading provider of purpose-built telephony applications servers for the SMB and Enterprise marketplaces. DAX Systems telephony applications servers provide independent software vendors (ISVs), developers, systems integrators, telecom distributors and interconnect companies with the performance and reliability necessary to deliver world-class telecommunications solutions.

DAX has been in business for 18 years supplying servers to the CTI community. With over 25,000 units deployed, the field failure rate is less than 1%. This is attributed to strict manufacturing controls, painful attention being paid to processes and procedures and constantly

monitoring the customers' needs and wants to ensure a hardware solution that will delight the customer.

DAX Systems has also recently become an AVAYA GOLD DevConnect Partner and had three of its servers tested and certified by the AVAYA Certification Lab in Lincroft, N.J. with IP OFFICE. This makes DAX one of two select server providers to be certified for the AVAY IP OFFICE line of products.

Headquartered in Parsippany, N.J., DAX Systems provides engineering, manufacturing and support for a complete line of telephony applications servers designed for voice processing, IP media services and VoIP applications. Information about DAX Systems is available at www.daxsystems.com.

About SpeechSwitch, Inc.:

SpeechSwitch previously was a wholly owned subsidiary of iVoice, Inc. (OTCBB:IVOI) prior to the spin-off from iVoice that was completed in August 2005 as a special stock dividend distribution to iVoice shareholders. SpeechSwitch, Inc. was incorporated in New Jersey on November 10, 2004 as a wholly owned subsidiary of iVoice, Inc. It is engaged in the design, manufacture, and marketing of specialized telecommunication equipment. Our products use standard open-architecture PC platforms and Microsoft Windows 2000 operating systems and XP, thereby facilitating the rapid adoption of new PC-based technologies while reducing overall product costs. We have traditionally used standard PC-related hardware components in our products, in part, to limit our need to manufacture components. Our new partnership with DAX for manufacturing operations consist only of the installation of our proprietary software and, if required, a voice board, into a fully assembled DAX server. The Company obtains system components such as circuit boards, application cards, fax boards, and voice boards from various suppliers. Our flagship product is our Speech-enabled Auto Attendant product. Additional information about SpeechSwitch can be found online at www.speechswitch.com
